

Pediatric Chronic Pain Programs in the United States and Canada

This list of dedicated pediatric chronic pain programs in the United States and Canada has been developed and maintained since 2012 by Tonya Palermo, PhD under the Pain in Infants, Children and Adolescents Special Interest Group (SIG) of the American Pain Society. Annually, information is solicited from pediatric pain programs via the [Pediatric-Pain Mailing List](#) to make program updates and to add new programs. Please note that information is not verified for accuracy. The list was most recently updated on 2018-12-11.

As of 2019-08-07, this resource is being transitioned to the International Association for the Study of Pain SIG on Pain in Childhood. Over the coming years, the resource will be expanded to become international, including programs in other countries outside the USA and Canada.

KY	Louisville	Children's Health & Illness Recovery Program (CHIRP) - Kosair Children's Hospital & Bingham Clinic (outpatient clinic and pediatric inpatient consultations)	University of Louisville School of Medicine Pediatrics Child Psychiatry & Psychology	http://louisville.edu/chirp/	200 E. Chestnut St. Louisville, KY 40202 Tel: (502) 588-0811	Bryan Carter, PhD (Director)	CHIRP is an evidence-based interdisciplinary collaborative management program for improving functioning in pediatric patients with chronic illness, with an emphasis on painful and fatiguing medical conditions. The manualized psychosocial treatment consists of twelve weekly 75-minute sessions driven by cognitive behavioral and systems interventions coordinated with the patient's referring physician/specialists, and employs multiple components including school advocacy, graduated physical exercise, sleep intervention, coping strategies intervention, interpersonal communication, etc. Psychiatric/pharmacology services can be provided as needed on an individualized basis. Sessions are conducted in separate teen and parent/guardian groups (5-8 teens/families per group), with 3 scheduled conjoint sessions. A quarterly drop-in follow up group is open to any and all teens/families who have completed CHIRP. Oxford University Press has contracted to publish the CHIRP CLINICIAN HANDBOOK and CHIRP PATIENT & FAMILY WORKBOOK in their Treatments That Work series, which should be in print by next summer.

The treatment team is led by gastroenterologists and a NP and is supported by allied health specialists including psychology, social work, family therapy, and physiotherapy. Medical assessment is mixed with psychological intervention including group sessions, 1:1 sessions, self-hypnosis, and other relaxation therapies.
		(iv) The Intensive Pain Rehabilitation Program				(iv) Laura Rayner, RN, MN Nivez Rasic, MD, FRCPC	(iv) The Intensive Pain Rehabilitation program is a 6 week, outpatient day treatment program for youth aged 8-18. The program admits youth and their families who have impaired functioning due to pain, with lack of progression with conventional outpatient pain treatment. The focus of the program is on self-management and rehabilitation; with the goal of returning the youth and their family to productive physical and psychological functioning within their community. The treatment team includes an attending pediatric anesthesiologist, a clinical nurse specialist, physical and occupational therapists, clinical psychologists, music/art/recreational therapists, a family counsellor and academic support within a hospital based classroom (at the Dr. Gordon Townsend School). Both individual and group therapies are provided through the program. The IPRP youth and families are followed up at 3/6/12 months (and then annually for 2-3 years) after the program to adjust and support functional goals, maintain function and to monitor clinical outcomes.
