<b>AUSTRALIA</b>											
1	Australia  New South Wales, Newcastle	John Hunter Children's Hospital	Children's Complex Pain Service	Not provided.	Elizabeth Kepreotes <a href="mailto:HNELHD-CCPS@health.nsw.gov.au">HNELHD-CCPS@health.nsw.gov.au</a>  Dr. Susie Lord <a href="mailto:Susie.Lord@health.nsw.gov.au">Susie.Lord@health.nsw.gov.au</a>	- Ped. & Adult Nurse - Ped. & Adult Pain Med. Specialist - Ped. & Adult Physical Therapist - Ped. & Adult Psychologist	- Outpatient - Telehealth - Outreach - Hydrotherapy - Pharmacologic - Physiotherapy - Psychological Treatment <b>- Service costs are free for patients.</b>	0 – 16 years	English + interpreter support for any other required	Open (no changes); More telehealth than was previously used. Initial consultations conducted over telehealth due to COVID-19 have needed to be rescheduled as a face to face consultation to progress care in all cases.	12/1/2020
	<b>Program description</b>	No formal group program. The Children's Complex Pain service is a part-time interdisciplinary team. Referral is via a medical practitioner with ongoing involvement in care for children under the age of 16yr. The team offers interdisciplinary outpatient consultation and review, alongside combined allied health therapy appointments for referred children. Dr/CNC inpatient consultations are provided at the request of the Admitting Medical Officer.

Rheumatologist - Teacher	- Outpatient services - Day treatment - Telehealth services - Occupational therapy - Pharmacologic - Physiotherapy - Procedures - Psychological treatment - <b>Service costs are free for patients.</b>	0 – 16 years	English	Open (no changes); Telehealth (phone or videoconference)	12/1/2020
<b>Program description</b>		The Complex Pain Service provides interdisciplinary care for children with chronic pain from across Western Australia using outpatient and day program models of care. Referral from a paediatric team at Perth Children's Hospital is required. Those families suitable for our group interdisciplinary cognitive behavioural program complete a 6-week intervention, with 12 months support (including formal reviews and informal booster sessions). Those not suitable for groups are cared for in a shared care model by our team and hospital or community-based health practitioners. We work closely with the Department of Education and have a teacher embedded in our clinical team to support young people transitioning back to full time school.									
<b>CANADA</b>											
5	Canada  Alberta, Calgary	Alberta Children's Hospital	The Vi Riddell Children's Pain & Rehabilitation Centre	<a href="https://www.albertahealthservices.ca/findhealth/Service.aspx?id=1008795&amp;serviceAtFacilityID=1023516">https://www.albertahealthservices.ca/findhealth/Service.aspx?id=1008795&amp;serviceAtFacilityID=1023516</a>	Laura Rayner <a href="mailto:Laura.Rayner@ahs.ca">Laura.Rayner@ahs.ca</a>  Nivez Rasic <a href="mailto:Nivez.Rasic@ahs.ca">Nivez.Rasic@ahs.ca</a>  Kelsey Barrie <a href="mailto:Kelsey.Barrie@ahs.ca">Kelsey.Barrie@ahs.ca</a>	- Ped. 	<b>Program description</b>	The Vi Riddell Pain & Rehabilitation Centre has 3 primary clinics/ programs: The Complex Pain Clinic, the Headache Clinic and the Intensive Pain Rehabilitation Program (IPRP). The clinics accept referrals within the Alberta Children's Hospital catchment area with the exception of the IPRP, which can receive referrals from across Canada. The clinics are multidisciplinary, or have access to a multidisciplinary team and all focus on the biopsychosocial model of care. All the clinics can refer to The Comfort Ability program. The IPRP has a partnership with the Calgary Board of Education where the youth are able to receive high school credits while completing their educational pain/therapeutic work in the program.

				<a href="#">erviceAtFacilityID=1074335</a>			- Services are free for patients				
	<b>Program description</b>	Young people with chronic pain (under 18) and their families are referred by their primary care providers. Our catchment area includes Northern Alberta, Northwest Territories, Yukon, and North Eastern British Columbia. Utilizing a biopsychosocial approach, we provide comprehensive care including, assessment and diagnosis, exercise program guided by physiotherapy, and cognitive behavioural therapy, individually and in group sessions (Pain 101). We have created Chronic Pain 35, a course approved by Alberta Education. This course allows high school students to obtain Grade 12 (senior secondary education) school credits for attendance and participation in our outpatient chronic pain self-management program. We also provide parent group education sessions.									
7	Canada  British Columbia, Vancouver	BC Children's Hospital	Complex Pain Service	Not provided	Tim Oberlander <a href="mailto:toberlander@bcchr.ca">toberlander@bcchr.ca</a>  Sarb Randhawa <a href="mailto:srandhawa3@cw.bc.ca">srandhawa3@cw.bc.ca</a>	- Ped. anesthesiologist - Ped. Nurse - Ped. pain med specialist - Pediatrician - Ped. Physical therapist - Ped. Psychologist	- Outpatient services - Inpatient services - Telehealth services - Hypnosis - Pharmacologic - Physiotherapy - Procedures - <b>Service costs are free for patients.</b>	0 – 17 years	English	Open (virtual/remote); In addition to virtual care, we are also providing in person assessments where needed.	12/1/2020
	<b>Program description</b>	Our Complex Pain Service offers a variety of nurse-MD consults, team assessments, ward consults and ongoing care. Our consult service focuses on goal setting, symptom reduction and functional improvement for children and youth across the developmental spectrum. We emphasize a shared care model that engages families, children and their community providers in building community capacity to assess and manage complex pain in ways that to ensure integrated pathways back to the community where children live.									
8	Canada  Quebec, Montreal	CHU Sainte-Justine	Not provided	Not provided	Marie-Joëlle Doré-Bergeron <a href="mailto:mdoreb@yahoo.ca">mdoreb@yahoo.ca</a>	- Ped. Nurse - Ped. 	<b>Program description</b>	Our multidisciplinary pain clinic sees patients with various pathologies. The initial assessment, as well as follow ups, are done as a group, meaning the MDs, nurse, PT and psychologist all see the patient together. We have a pediatric psychiatrist who is trained in chronic pain, as well as a pediatrician who is also trained in chronic pain and an anesthesiologist. Hospitalized patients can also be seen by members of our team, but we currently don't have an inpatient or outpatient intensive rehab program.									
9	Canada  Quebec, Montreal	Montreal Children's Hospital	Chronic Pain Service	<a href="https://www.thechildrean.com/departments-and-staff/departments/department-of-pain-management-pediatric-chronic-pain-management_01">https://www.thechildrean.com/departments-and-staff/departments/department-of-pain-management-pediatric-chronic-pain-management_01</a>	Pablo Ingelmo <a href="mailto:Pablo.ingelmo@mcgill.ca">Pablo.ingelmo@mcgill.ca</a>  Rebecca Pitt <a href="mailto:Rebecca.pitt@muhc.mcgill.ca">Rebecca.pitt@muhc.mcgill.ca</a>	- Ped. Psychologist	- Outpatient Services -Telehealth -Hypnosis - Pharmacologic - Physiotherapy - Procedures - Psychological Treatment -Social worker <b>-Service costs are free for patients</b>	0 – 17 years	English, French; Director also speaks Spanish and Italian	Open (no changes); (1) We are doing more telehealth than we were before. Prior to COVID we did one day telehealth per month, Now all of our follow ups are by Zoom unless a hands-on physical exam is required. (2) All patients coming in for a procedure are tested for COVID then isolated in the 24-36 hours prior.	12/1/2020
	<b>Program description</b>	The Chronic Pain Service (CPS) consists of a clinical, educational and research multidisciplinary team. The CPS team strives to optimize physical and psychological function, normalize sleep and social function (school attendance and age dependent quality of life), and increase levels of activity, while assisting the management of pain. The team guides patients and families toward successful strategies to understand and manage pain and to modulate negative behaviors regarding pain and disability. Improved functioning is the most important outcome in the treatment. Of interest, patients generally report significant improvement in function before reporting decreases in pain.

Most patients are receiving a hybrid of in-person/virtual sessions.	12/1/2020
	<b>Program description</b>	We provide an interdisciplinary clinic one and a half days a week. Providing new consult and follow up clinics. Individual treatment appts occur throughout the rest of the week, including individual sessions for Pain Education, Psychology, Psychiatry, Physiotherapy, Social Work, and pharmacy consultation. Our program provides interventional procedures if needed, but this is not our first line of treatment. Including nerve blocks, and lidocaine infusions. We provide the Comfort Ability Workshop four times a year, and have plans for more group work for our patients.

	<b>Program description</b>	Families or family doctors contact us. After an initial evaluation on the telephone the family receive questionnaires. Once the questionnaires are back, we schedule an outpatient appointment with a pediatric pain specialist and a pediatric psychotherapist. Then we decide together with the family whether outpatient treatment is enough or whether the child needs inpatient intensive interdisciplinary treatment. Treatment is individualized but quality controlled; for details see our treatment Manual: Dobe/Zernikow (Editors) Practical Treatment Options for Chronic Pain in Children and Adolescents: An Interdisciplinary Therapy Manual; 2nd issue, Springer 2019.

	<b>Program description</b>	2B-active is a multidisciplinary pain rehabilitation program with active treatment sessions for both adolescents and their parents. This program aims to restore the adolescents' age-appropriate functional abilities by systematically reducing pain-related fear and catastrophic thinking through gradually exposing adolescents to fear-provoking daily activities and movements. For adolescents, the treatment entails an intake session with a consultant in rehabilitation medicine, screening, and 14 program sessions of 60 minutes (an education session, and twelve graded exposure in vivo session), during a 7-week period. For parents, three parent meetings are offered in parallel with their adolescents' program, in a group or individually.

	<b>Program description</b>	After referral to our pain Clinic some questionnaires are sent. Then triage is done to decide if the patient can be seen by a single professional or multidisciplinary. If the patient is examined on the first visit by our physician assistant, advice for physical therapy, medication or pain education can be given. Also, smaller interventions like trigger point, TENS, iontophoresis or hypnosis are done. If the patient is seen by the multidisciplinary team (more complex patients) this happens first by anesthesiologist-pain specialist together with physical therapist and then by a psychologist. Then, the team discusses the best treatment option, and this is communicated to patient and parents. Several treatment options are possible, such as: physiotherapy, medication or psychological treatment.

	<b>Program description</b>	Patients are referred to us by their GPs, rheumatology, orthopaedics, Spinal, Gastroenterology, neurology and neurosurgery. They enter our service via our multi-disciplinary pain clinic. This is followed by a pain education class which the whole family can attend. During this class we discuss the nature of pain, the difference between acute and chronic pain and our philosophy to treatment. We then offer outpatient appointments with physiotherapy, occupational therapy, and clinical psychology, based on the need of the child and the family. Some of our patients then come to one of our intensive rehabilitation programmes. Our programme is largely non-medical. Exposure to feared movements, activities and situations is a big part of the programme.

<b>Program description</b>		The inpatient chronic pain team at Children's Specialized Hospital Chronic Pain Management Program at Rady Children's Hospital -San Diego promotes wellness of young people with chronic pain by teaching strategies to manage pain and encourage functional activity. The inpatient program is for children, adolescents and young adults with chronic pain who continue to have significant pain and dysfunction despite trials of consistent outpatient therapy. Our evidence-based, opioid- and pain medication-free model focuses on regaining function, de-emphasizing pain and developing appropriate pain management skills. The duration of the program is typical four weeks and the focus is to increase function, decrease pain and sensitivity, and promote adaptive coping skills to be fully involved in school, home, vocation and community life.

	<b>Program description</b>	We bring together a team of board-certified anesthesiologists, nurse practitioners, physician assistants and psychologists to meet the needs of each child or adolescent with pain issues or chronic illness. Together with families, our specialists will create a personalized treatment plan. This plan may include medications or procedures along with complementary therapies such as psychotherapy, biofeedback, occupational and physical therapy solely dedicated to the management of pain. Our chronic pain management service uses a multidisciplinary team to evaluate patients in our Outpatient Care Center. The chronic pain service offers a short-term inpatient rehabilitation program for youth with Complex Regional Pain Syndrome (CRPS) and related chronic pain conditions limiting functioning.

	<b>Program description</b>	The Chronic Pain Treatment Program provides interdisciplinary outpatient evaluations, outpatient follow-up, and a brief (4-6 session) integrated pain treatment program to children and adolescents with chronic pain (0-18 years of age). Entry into the clinic is by referral from a primary care provider, sub-specialist, or self-referral. All patients undergo a comprehensive interdisciplinary assessment by a team consisting of an anesthesiologist, pediatric nurse practitioner, physical therapist, and a pain psychologist. Multidisciplinary care is emphasized, though interventional treatment is available to select patients after they have undergone evaluation. Program currently undergoing some changes related to multidisciplinary staffing, following the Covid-19 pandemic.

	<b>Program description</b>	The MiPAIN (Michigan Pediatric Adolescent Interdisciplinary Network) is a comprehensive pain program housed within the University of Michigan's CS Mott Children's Hospital. The program is designed to meet the needs of pediatric and adolescent patients with ongoing pain and their caregivers. Our overarching goal is to educate individuals and their caretakers about the nature of pain, why it arises within an individual and most importantly how they can live full and enriching lives while effectively managing their pain and reducing its impact. Examples of what we hope participants in our program accomplish include being fully engaged in developmentally appropriate activities like academic pursuits, return to sports and leisure activities, we hope they remain socially engaged with friends and peers and improve their participation in family responsibilities. Our partnership with patients begins with a thorough review of medical records, review of patient-centered questionnaires and a combination of face-to-face and virtual evaluations with patients and their families to arrive at an accurate diagnosis and comprehensive tailored treatment plan. To facilitate individuals to get back to living, we offer psychotherapy, physical therapy, occupational therapy, recreation therapy, art therapy,									

#	Location	Hospital	Program	Website	Contact	Professionals	Services	Age of Patients	Languages of Service	COVID adjustments	Last Updated
		medication management and interventional strategies when needed. While our treatment approach is tailored to individual patient and family need, we consistently offer three tiers of intervention with increasing levels of intensity. The first tier includes individual therapies like psychology, physical or occupational therapy or medication management. Our paired model of care is a combination of physical or occupational therapy and psychotherapy aimed at facilitating recovery from pain-related disability and return to active and fulfilling lifestyles through experiential learning. This allows participants to actively apply physical therapy and psychological principles to their daily life in sustained, but brief episodes of care. Finally, we offer a multi-week intensive outpatient program (IOP) in which participants (both patient and families) work with psychologists, physical therapists, occupational therapists, physical medicine and rehabilitation physicians, an art therapist and recreational therapist in both individual and group settings. This program, while intense is designed to help ready participants "jump start" their coping with chronic pain, learn new coping strategies to deal effectively with their pain in a safe and supportive environment. Participants and their families learn from each other and their therapists through individual and group models of care. Finally, we take advantage of the vibrant academic focus of the University of Michigan campus by training the next generation of pain providers including psychology, medical residents and pain fellows. It is within this environment that we also conduct active lines of research identifying fundamental mechanisms of pediatric chronic pain, refining patient reported outcomes and measuring pain treatment effectiveness.

	<b>Program description</b>	Children and adolescents (typically ages 5-18 years old) are referred from primary care and specialty medical practices. They receive a 4-part (medical, physical therapy, psychological, social work) evaluation. The interdisciplinary team provides assessment, plan, and recommendations for treatment. The most common treatment recommendations include individual physical therapy, individual (including caregivers) psychological therapy, co-treatment with physical therapist and psychologist (current model is once per week for 10 weeks with both individual and joint sessions with a psychologist and physical therapist and regular physician check-ins), medication intervention, or a combination of the above. We refer to other sub-specialty practices as needed.

	<b>Program description</b>	The Abdominal Pain Program at Children's Mercy is a unique clinical and research program devoted to the evaluation and treatment of pediatric abdominal pain. In the program, new patients are assessed by a gastroenterologist and psychologist at the same time, in the same clinic visit. We screen/evaluate for a wide variety of potential biologic, psychologic, and social contributors to pediatric abdominal pain. This allows us to establish a comprehensive plan unique to each child or adolescent patient we see. At the end of the evaluation visit, families are presented with a single, integrated treatment plan. Interventions include medication management, biofeedback assisted relaxation training, cognitive-behavioral therapy, graduated school re-entry, and physical therapy, among others.

							state Medicaid plans but will try and obtain out of network authorizations. We do offer parents to pay 100% NJ Medicaid Rates should they opt to private pay due to lack of insurance or insurance denials.			residence. NJ requires families travelling from states on the NJ travel advisory list to self-isolate when entering NJ for 14 days; CSH follows this guidance.	
	<b>Program description</b>	The inpatient chronic pain team at Children's Specialized Hospital promotes wellness of children and adolescents with chronic pain by teaching them strategies to manage pain and encourage functional activity. The inpatient program is for children, adolescents, and young adults with chronic pain who continue to have significant pain and dysfunction despite trials of consistent outpatient therapies. This evidence-based program focuses on regaining function, de-emphasizing pain, and developing appropriate pain management skills. The duration of the program is typically four weeks and employs a multidisciplinary model to increase function, decrease pain and sensitivity, and promote the use of adaptive coping skills for return to home, school, community and leisure.

	<b>Program description</b>	We provide care for all pain conditions on both an outpatient and inpatient basis. Outpatients see a nurse, Pain physician, psychologist and physical therapist, all of whom have specialized training and experience in pain assessment and treatment. Our inpatient pain rehabilitation program (the FIRST Program) provides functional restorative care for patient whose pain is associated with severe functional compromise that has not adequately responded to outpatient treatment. Our pediatric pain fellowship was the second ACGME accredited, free-standing pediatric pain fellowship in the United States. We also are part of the newly formed Center for Understanding Pediatric Pain (CUPP) a comprehensive, multidisciplinary research consortium at Cincinnati Children's Hospital.

	<b>Program description</b>	We have a referral network throughout Texas, New Mexico, Oklahoma, Arkansas, and Louisiana. Our model brings together conventional medicine and complementary therapies. The focus of our pain program is a multidisciplinary/integrative approach to the management of pain including pharmacologic, interventional, and nonpharmacologic therapies. We perform a detailed history and physical exam, we delve into the patient's diet, exercise routine, sleep habits, stressors, risk of abuse/bullying, school performance, family/social support, and pain psychology. A treatment plan is based on our collective findings and incorporates strategies that focus on medication, mind-body therapies, lifestyle modifications, coping mechanisms, and interventional procedures.

	<b>Program description</b>	<p>The Pain Medicine program provides care through three different arms: an inpatient consultation service, an interdisciplinary outpatient clinic, and a pain rehabilitation program that is principally a day treatment program with the capacity to hospitalize patients for rehabilitation of more complicated or compromised conditions. Entry into the pain medicine clinic is by referral and all patients undergo a comprehensive interdisciplinary assessment by a team consisting of a physician, a pain psychologist, a rehabilitation specialist and a nurse. Treatment approaches are evidence based, including the use of medications, procedural interventions, cognitive-behavioral strategies, physical and occupational rehabilitation, and acupuncture.</p>

	<b>Program description</b>	The program at the AFCH pain clinic has both inpatient and outpatient multidisciplinary pain medicine programs. We see all types of pain as an outpatient and also have two separate multidisciplinary clinics for Complex Regional Pain Syndrome (CRPS)/complex rehab issues and Ehlers Danlos Syndrome (EDS). For inpatient we									

#	Location	Hospital	Program	Website	Contact	Professionals	Services	Age of Patients	Languages of Service	COVID adjustments	Last Updated
		offer intensive CRPS treatments as well for chronic pain in which function is very decreased. We offer all procedures that would be necessary as well as manage medications. Psychology and PT/OT are mainstays of the program and patients see them as well.

	<b>Program description</b>	Our Program combines knowledge in specialties like: Anesthesiology, Advanced Practice Nursing, Psychology, Pain management, Individual and family therapy, Physical and occupational therapy, and Integrative Medicine. In addition to using pain medicine when appropriate, we will help your child cope with discomfort by using non-medication interventions, such as relaxation, distraction and cognitive behavioral techniques. Our most significant goal is to help your child return to leading a normal lifestyle.									

## Services list

In each cell, there is a list of centers offering that service. Click on the name of the clinic to see the full information.
