AUSTRALIA										
1	Australia New South Wales, Mulubinbah- Newcastle	John Hunter Children's Hospital	Children's Complex Pain Service	https://www.hnecidshealth.nsw.gov.au/childrens_hospital/specialist_services/pain	Dr. Susie Lord, Specialist Pain Medicine Physician HNELHD-CCPS@health.nsw.gov.au	- Ped. Pain Med. Specialist - Ped. Physical Therapist - Ped. Psychologist - Ped. Social Worker	- Outpatient - Telehealth - Consultative inpatient service - Outreach service to Awabakal Aboriginal Community Controlled Health Service - Outreach service to some Hunter New England regional hubs - Parent /carer support - School liason - Service costs are free for patients. * 40% of service staff are Aboriginal People	0 – 19 years	English + interpreter service for non-English speaking patients and families	1/6/2022
	Program description	Referrals are accepted from general practitioners or specialists involved in ongoing care of the young person. Children and young people must be aged 0-16 years at time of referral, but care may continue up to 19 years of age. Prioritisation is based on pain-related impacts on sleep, mobility, learning participation, relationships and mood. Children who are Aboriginal and/or Torres Strait Islander people, refugees and/or in out of home care are prioritised. Service clinicians may support primary health clinicians caring for the child with interim advice whilst awaiting assessment. Patients are assessed by the interdisciplinary team in a combined session(s), followed by individualized interdisciplinary pain management (integrated therapy tailoring pharmacological, physiotherapy, psychological therapies and social support to child and family needs)

2	Australia New South Wales, Sydney	The Children's Hospital at Westmead	Complex pain clinic; Day program: T.A.M.E your pain	https://www.schn.health.nsw.gov.au/find-a-service/health-medical-services/pain-medicine/chw	Natasha Haynes natasha.haynes@health.nsw.gov.au	- Ped. Nurse - Ped. Pain Med Specialist - Ped. Physical Therapist - Ped. Psychologist	- Outpatient services - Day treatment - Telehealth services - Hydrotherapy - Pharmacologic - Physiotherapy - Psychotherapy - Service costs are free for patients.	0 – 18 years	English with interpreter services available if required	1/6/2022
Program description		Complex and intractable pain is managed through an out-patient interdisciplinary (medical, nursing, psychology, physiotherapy) consultative service, a moderate intensity day program (T.A.M.E. Your Pain), a Tele-health service, and an inpatient medical and nursing consultative service. The service receives state-wide referrals from general practice and specialists. Inpatient admission occurs under the care of the primary team caring for the child with consultation from medical and nursing pain clinic staff.								
3	Australia Queensland, Brisbane	Queensland Children's Hospital	Interdisciplinary Paediatric Persistent Pain Service	https://www.childrens.health.qld.gov.au/service-queensland-interdisciplinary-paediatric-persistent-pain/	Mark Alcock Mark.Alcock@health.qld.gov.au	- Ped. Anesthesiologist - Ped. Nurse - Ped. Occupational Therapy - Ped. Physical Therapist - Ped. Pain Med Specialist - Ped. Psychologist - Ped. Psychiatrist - Music Therapist	- Outpatient services - Telehealth services - Occupational therapy - Pharmacologic - Physiotherapy - Psychotherapy - Service costs are free for patients.	0 – 18 years	English; Translator services for non-English speaking patients and families	1/6/2022
Program description		We run medical clinics and interdisciplinary clinics. Our interdisciplinary clinics typically consist of an assessment phase and therapy phase. We practice an evidence-based sociopsychobiomedical approach, and individualise our care to our patient and family needs.

4	Australia Western Australia, Perth	Perth Children's Hospital	Complex Pain Service	https://pch.health.wa.gov.au/Our-services/Complex-Pain	Anna Hilyard anna.hilyard@health.wa.gov.au	- Ped. Psychiatrist	- Day treatment - Telehealth services - The Comfort Ability Program - Occupational therapy - Pharmacologic - Physiotherapy - Procedures - Psychological treatment - Service costs are free for patients.	0 – 16 years	English	1/6/2022
Program description		The Complex Pain Service provides interdisciplinary care for children with chronic pain from across Western Australia using outpatient and day program models of care. Referral from a paediatric team at Perth Children's Hospital is required. The Comfort Ability Program is provided as an entry to the interdisciplinary allied health clinical pathway, with a moderate intensity (50 hour over 6 weeks) group interdisciplinary cognitive behavioural program also available. Those families not suitable for groups are cared for in a shared care model by our team and hospital or community-based health practitioners. We work closely with the Department of Education and have a teacher embedded in our clinical team to support young people transitioning back to full time school.

Program description		<p>Our program offers an interdisciplinary assessment using a biopsychosocial approach. New patients and their families receive questionnaires that we analyze before the intake. We privilege joint consultation (pediatrician or physical medicine + psychologist or ped psychiatrist + nurse). We help patient and families understand what's chronic pain and how to manage (education). We provide patients and families with tools to take control over the pain and cope with it.</p> <p>We offer a tailored approach combining pharmacological, physical, psychological and integrative therapies. We refer to external networks. We offer a follow-up adapted to the individual needs.</p>

	Program description	Young people with chronic pain (under 18) and their families are referred by their primary care providers. Our catchment area includes Northern Alberta, Northwest Territories, Yukon, and North Eastern British Columbia. Utilizing a biopsychosocial approach, we provide comprehensive care including, assessment and diagnosis, exercise program guided by physiotherapy, and cognitive behavioural therapy, individually and in group sessions (Pain 101). We have created Chronic Pain 35, a course approved by Alberta Education. This course allows high school students to obtain school credits for attendance and participation in our outpatient chronic pain self-management program. We also provide parent group education sessions

							extended benefits or funded by the family.			
	Program description	Our Complex Pain Service offers a variety of nurse-MD consults, team assessments, ward consults and ongoing care. Our consult service focuses on goal setting, symptom reduction and functional improvement for children and youth across the developmental spectrum. We emphasize a shared care model that engages families, children and their community providers in building community capacity to assess and manage complex pain in ways that to ensure integrated pathways back to the community where children live.								
10	Canada Quebec, Montreal	CHU Sainte-Justine	Not provided	Not provided	Marie-Joëlle Doré-Bergeron mdoreb@yahoo.ca	- Ped. Nurse - Ped. Pain Med Specialist - Pediatrician - Ped. Physical Therapist - Ped. Psychiatrist - Ped. Psychologist	- Outpatient Services - Pharmacologic - Physiotherapy - Procedures - Psychological Treatment			12/1/2020
	Program description	Our multidisciplinary pain clinic sees patients with various pathologies. The initial assessment, as well as follow ups, are done as a group, meaning the MDs, nurse, PT and psychologist all see the patient together. We have a pediatric psychiatrist who is trained in chronic pain, as well as a pediatrician who is also trained in chronic pain and an anesthesiologist. Hospitalized patients can also be seen by members of our team, but we currently don't have an inpatient or outpatient intensive rehab program.

							- Service costs are free for patients.			
	Program description	Our interdisciplinary complex pain team assists patients and families with the management of pain while seeking to optimize physical, psychological, sleep, and social function. At the first visit, the patient will undergo individualized sensory testing before meeting with our team for a physical and psychosocial assessment. By the end of that visit, our goal is to elaborate a personalized treatment plan that we communicate on the spot to patients and families, providing a road map toward optimized functioning. We follow up our patients every 2-3 months in clinic, while psychology, social work and physiotherapy work with the patient and parents between clinic visits. We are involved in educational activities around complex pain for primary care practitioners in Quebec. Finally, we are continually analyzing outcomes and sharing with the broader clinical and research community to ensure that we are providing evidence-informed, people- and family-centered care to all of our patients.

	Program description	Families or family doctors contact us. After an initial evaluation on the telephone the family receive questionnaires. Once the questionnaires are back, we schedule an outpatient appointment with a pediatric pain specialist and a pediatric psychotherapist. Then we decide together with the family whether outpatient treatment is enough or whether the child needs inpatient intensive interdisciplinary treatment. Treatment is individualized but quality controlled; for details see our treatment Manual: Dobe/Zernikow (Editors) Practical Treatment Options for Chronic Pain in Children and Adolescents: An Interdisciplinary Therapy Manual; 2nd issue, Springer 2019.

	Program description	2B-active is a multidisciplinary pain rehabilitation program with active treatment sessions for both adolescents and their parents. This program aims to restore the adolescents' age-appropriate functional abilities by systematically reducing pain-related fear and catastrophic thinking through gradually exposing adolescents to fear-provoking daily activities and movements. For adolescents, the treatment entails an intake session with a consultant in rehabilitation medicine, screening, and 14 program sessions of 60 minutes (an education session, and twelve graded exposure in vivo session), during a 7-week period. For parents, three parent meetings are offered in parallel with their adolescents' program, in a group or individually.

	Program description	After referral to our pain Clinic some questionnaires are sent. Then triage is done to decide if the patient can be seen by a single professional or multidisciplinary. If the patient is examined on the first visit by our physician assistant, advice for physical therapy, medication or pain education can be given. Also, smaller interventions like trigger point, TENS, iontophoresis or hypnosis are done. If the patient is seen by the multidisciplinary team (more complex patients) this happens first by anesthesiologist-pain specialist together with physical therapist and then by a psychologist. Then, the team discusses the best treatment option, and this is communicated to patient and parents. Several treatment options are possible, such as: physiotherapy, medication or psychological treatment.

	Program description	This is a clinic within the children's hospital. Initial appointments are multidisciplinary and all patients see the physician, nurse practitioner, psychologist, and physical therapist. Follow-up appointments are scheduled with these providers in pain clinic as indicated. When needed we have providers from other specialties consult in pain clinic including neurology, neurosurgery, and PMR. In addition to outpatient services we can admit patients for inpatient pain rehabilitation admissions on our general rehab floor.

	Program description	CHIRP, the Children's Health and Illness Recovery Program, is an evidence-based interdisciplinary family-based treatment program designed to maximize the functioning of teens with chronic illness and chronic pain. CHIRP employs a structured treatment approach that helps teens develop specific skills in identifying and managing the stresses that come with chronic illness. Multidisciplinary collaboration with the patient's primary care physician, specialists, other health care professionals, and school/academic personnel enhance and facilitate the teen's increased functioning and independence in managing their illness and returning to more normal functioning.

	Program description	We offer comprehensive evaluation and treatment of chronic pain emphasizing a biopsychosocial approach to each child and family. In our Multidisciplinary Pain Treatment Center, we offer specialized programs for chronic headaches, chronic pelvic and abdominal pain, musculoskeletal pain, cancer pain, sickle cell related pain and a variety of other pain conditions. Patients are evaluated by a team of pain physicians, nurse practitioners, psychologists, psychiatrists, and physical and occupational therapists. Consultations with providers in other specialties such as neurosurgery, rheumatology, and orthopedics are available as indicated. Medications, cognitive-behavioral and physical therapies are the mainstays of treatment but we also offer interventional pain procedures, acupuncture and other modalities as part of our comprehensive approach to address function, pain, and pain-related symptoms. For patients who require a higher level of care, we offer a day hospital pain rehabilitation program, the Mayo Family Pediatric Pain Rehabilitation Center.

	Program description	<p>The MiPAIN (Michigan Pediatric Adolescent Interdisciplinary Network) is a comprehensive pain program housed within the University of Michigan's CS Mott Children's Hospital. The program is designed to meet the needs of pediatric and adolescent patients with ongoing pain and their caregivers. Our overarching goal is to educate individuals and their caretakers about the nature of pain, why it arises within an individual and most importantly how they can live full and enriching lives while effectively managing their pain and reducing its impact. Examples of what we hope participants in our program accomplish include being fully engaged in developmentally appropriate activities like academic pursuits, return to sports and leisure activities, we hope they remain socially engaged with friends and peers and improve their participation in family responsibilities. Our partnership with patients begins with a thorough review of medical records, review of patient-centered questionnaires and a combination of face-to-face and virtual evaluations with patients and their families to arrive at an accurate diagnosis and comprehensive tailored treatment plan. To facilitate individuals to get back to living, we offer psychotherapy, physical therapy, occupational therapy, recreation therapy, art therapy, medication management and interventional strategies when needed. While our treatment approach is tailored to individual patient and family need, we consistently offer three tiers of intervention with increasing levels of intensity. The first tier includes individual therapies like psychology, physical or occupational therapy or medication management. Our paired model of care is a combination of physical or occupational therapy and psychotherapy aimed at facilitating recovery from pain-related disability and return to active and fulfilling lifestyles through experiential learning. This allows participants to actively apply physical therapy and psychological principles to their daily life in sustained, but brief episodes of care. Finally, we offer a multi-week intensive outpatient program (IOP) in which participants (both patient and families) work with psychologists, physical therapists, occupational therapists, physical medicine and rehabilitation physicians, an art therapist and recreational therapist in both individual and group settings. This program, while intense is designed to help ready participants "jump start" their coping with chronic pain, learn new coping strategies to deal effectively with their pain in a safe and supportive environment. Participants and their families learn from each other and their therapists through individual and group models of care. Finally, we take advantage of the vibrant academic focus of the University of Michigan campus by training the next generation of pain providers including psychology, medical residents and pain fellows. It is within this environment that we also conduct active lines of research identifying fundamental mechanisms of pediatric chronic pain, refining patient reported outcomes and measuring pain treatment effectiveness.</p>

	Program description	The Abdominal Pain Program at Children's Mercy is a unique clinical and research program devoted to the evaluation and treatment of pediatric abdominal pain. In the program, new patients are assessed by a gastroenterologist and psychologist at the same time, in the same clinic visit. We screen/evaluate for a wide variety of potential biologic, psychologic, and social contributors to pediatric abdominal pain. This allows us to establish a comprehensive plan unique to each child or adolescent patient we see. At the end of the evaluation visit, families are presented with a single, integrated treatment plan. Interventions include medication management, biofeedback assisted relaxation training, cognitive-behavioral therapy, graduated school re-entry, and physical therapy, among others.

	Program description	The Outpatient Pediatric Pain Management Clinic at Children's Hospital evaluates patients on an outpatient basis by referral from the child's primary care or specialist provider. Our outpatient clinicians tailor a unique plan specifically for the child's needs and may use a combination of medications, interventional procedures (such as nerve blocks), physical therapy and mental health care support. Pain management procedures to reduce pain are often done in clinic but may also be performed under sedation provided by either the sedation service or anesthesiology. Our clinic operates one day a week. We are also available to answer questions Monday through Friday via telephone.

	Program description	We have a referral network throughout Texas, New Mexico, Oklahoma, Arkansas, and Louisiana. Our model brings together conventional medicine and complementary therapies. The focus of our pain program is a multidisciplinary/integrative approach to the management of pain including pharmacologic, interventional, and nonpharmacologic therapies. We perform a detailed history and physical exam, we delve into the patient's diet, exercise routine, sleep habits, stressors, risk of abuse/bullying, school performance, family/social support, and pain psychology. A treatment plan is based on our collective findings and incorporates strategies that focus on medication, mind-body therapies, lifestyle modifications, coping mechanisms, and interventional procedures. In addition to our outpatient clinic, we also provide inpatient services for patients suffering from chronic pain who are not functionally able to maintain activities of daily living. A clinic evaluation must be completed prior to inpatient referral to review admission criteria. This will be arranged by the clinic nurse coordinator.

	Program description	Our Program combines knowledge in specialties like: Anesthesiology, Advanced Practice Nursing, Psychology, Pain management, Individual and family therapy, Physical and occupational therapy, and Integrative Medicine. In addition to using pain medicine when appropriate, we will help your child cope with discomfort by using non-medication interventions, such as relaxation, distraction and cognitive behavioral techniques. Our most significant goal is to help your child return to leading a normal lifestyle.								

Services list

In each cell, there is a list of centers offering that service. Click on the name of the clinic to see the full information.
